

- Added the Expense ID as a visible field on the Expenses list and entry form.

The image shows two screenshots from the FusionInvoice application. The top screenshot is the 'Expenses' list, which includes a table with columns: ID, Date, Category, Description, Amount, Attachments, and Options. A red arrow points to the 'ID' column. The bottom screenshot is the 'Expense #2' entry form, which includes fields for Company Profile, Date, Category, Amount, Tax, Vendor, Client, and Description. A red arrow points to the 'Expense #2' title.

- Bug Fix: The new 'Send Test Email' feature (Configuration->System Settings->Email) could create an error condition when trying to view the Mail Log report, if values for CC or BCC were filled in.
- Bug Fix: If a custom field of type URL was added to a base table (I.e. Clients) and the based table's record was added or edited, with the URL field left empty, a prompt would display showing, "Please enter a valid URL...".
- Bug Fix: The newly improved responsive invoice display (better visibility viewing invoices and quotes on mobile devices) could cut off the view for very long invoices.
- Bug Fix: The improved Mollie payments gateway could error when attempting a payment for larger amounts.
- Bug Fix: The System Settings function (button) 'Download Database Backup' could fail with a "Whoops, looks like something went wrong." error, when the MySQL server was configured to use a port other than the default (3306).
- Other minor improvements and bug fixes.
